PROFILE

Artificial Intelligence Engineering student and Data Science trainee with hands-on experience across the full data science pipeline, including exploratory data analysis, feature engineering, model building, evaluation, and deployment. Built and applied these skills through the IBM-designed DEPI Data Scientist track, NVIDIA Deep Learning Institute, Kaggle, and team-based academic projects using Python, SQL, and modern machine learning tools.

EDUCATION

Bachelor's Degree in Artificial Intelligence Engineering 2023 – Present
Mansoura National University, Faculty of Engineering
Grade: Very Good | GPA: 3.6 / 4.0

PROFESSIONAL EXPERIENCE

Data Science Trainee Jul 2026 – Present
Digital Egypt Pioneers Initiative (DEPI) — AI & Data Science Track, designed by IBM

- Completing an IBM-designed curriculum covering the full data science lifecycle, from Python and SQL to data visualization, machine learning, and MLOps.
- Practicing feature engineering, model building, and model evaluation using Python and Scikit-learn through hands-on labs and a capstone project.
- Applying prompt engineering techniques and MLOps tools, including MLflow and Hugging Face, to prepare models for deployment.

PROJECTS

Student Digital Life & Academic Performance Analysis — Data Analyst Sep 2026
Digital Egypt Pioneers Initiative (DEPI) — AI & Data Science Track, designed by IBM

- Analyzed a 15,000-record dataset on students' digital habits (social media, gaming, streaming) and daily-life factors (sleep, exercise, mental health) to study their relationship with academic performance, using Python, Pandas, and NumPy.
- Handled outliers across 10 key features using IQR-based clipping and ran correlation analysis to identify the strongest drivers of final exam scores.
- Built and validated a study-hours-based performance benchmark against an independent 1,000-student dataset with a different structure, testing cross-dataset generalization.

Australian Weather & Rain Analysis — Data Analyst Sep 2026
Digital Egypt Pioneers Initiative (DEPI) — AI & Data Science Track, designed by IBM

- Cleaned and processed a 145,460-record Australian weather dataset using location- and time-aware imputation, including linear interpolation and geographic nearest-station estimation with the folium library.
- Engineered temporal features (year, month, season) and conducted extensive univariate and temporal EDA to uncover rainfall patterns across locations and seasons.
- Tested three statistical baseline approaches — historical frequency, prior-month indicators, and nearest comparable year — to estimate rain probability, laying the groundwork for a predictive model.

SKILLS

- Programming & Databases: Python, SQL
- Data Science Pipeline: EDA, Feature Engineering, Model Building, Model Evaluation, Deployment, Problem Solving with Python
- Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn
- Foundations: Machine Learning, Data Structures & Algorithms, OOP, Applied Mathematics & Statistics

CERTIFICATIONS & TRAINING

- Problem Solving (Basic & Intermediate) and Python (Basic) — HackerRank 2026
- Intro to Deep Learning & Computer Vision — Kaggle 2026
- Computer Vision — Kaggle 2026
- Fundamentals of Deep Learning — NVIDIA Deep Learning Institute 2026
- Introduction to Deep Learning — Information Technology Institute (ITI), Mahara-Tech 2026
- Python Programming Basics — Information Technology Institute (ITI), Mahara-Tech 2026
- Getting Started with Deep Learning — NVIDIA Deep Learning Institute 2025
- Big Data Analysis — National Telecommunication Institute (NTI) & ITIDA, 120 hours, Score 92.5% 2025
- AI & Machine Learning Training Program — CREATIVA Innovation Hub, ITIDA & TIEC, 100 hours 2025
- AI Basic: Overview of AI — Huawei ICT Academy, CRA Training Program 2025
- Freelancing Skills Training Program — ITIDA Gigs & EYouth, 3-month program 2025
